Education

- New York University**, M.S. Computer Science May 2028
- The Ohio State University**, B.S. Computer Science Engineering, B.S. Mathematics May 2026
- **Relevant Coursework:** Machine Learning, Data Structures and Algorithms, Operating Systems, Databases, Data Mining, Networking, Programming Languages, Linear Algebra, Real Analysis, Statistics
 - Undergraduate Teaching Assistant (CSE 2331/5331)

Experience

- Amazon** – Software Development Engineer Intern Sep 2026 – Present
- Incoming on the Training & Certifications team in a full-stack role using React, Typescript, and GraphQL
- Capital One** – Software Engineer Intern Jun 2026 – Aug 2026
- Engineered Python pipelines analyzing 75M+ daily transactions to trigger real-time subscription alerts
 - Designed scalable EventBridge/Step Function infra supporting a user base expansion by >14M to ~84M
 - Authored YAML configs and improved reliability by implementing E2E, component, and smoke testing
- JPMorganChase** – Software Engineer Intern Jun 2025 – Aug 2025
- Reduced trading application & test failure response times by 18% via a full-stack React/Java dashboard
 - Engineered time-series APIs predicting routine downtime windows to diagnose root-cause anomalies
 - Saved ~4 hours/week by building a configurable SQL probe runner for automated service checks
- Immuta** – Research Engineer Intern May 2024 – May 2025
- Decreased sensitive data discovery error rate below 1% by building a regex-to-automata compiler, improving data class coverage by 36% through pattern tuning and expanded data catalog ingestion
 - Optimized AWS Bedrock LLM costs by 12% through context caching & prompt compression
 - Clustered regex using PyTorch & BERT models to automate sensitive high-level data class classification
 - Built an LLM prompt evaluation tool in Python using cosine similarity to prevent model output drift
- DataLab at The Ohio State University** – Undergraduate Research Assistant Aug 2023 – Apr 2026
- Researched stochastic differential equations to optimize smoothing & sampling in diffusion video models
 - Modeled uncertainty calibration on probability distributions to quantify LLM response reliability
 - Leveraged measure theory to establish theoretical frameworks for single-source ergodic extraction

Projects

- RAG Supply Chain Assistant** | *Python, Azure, Ignition, FastAPI* Aug 2025 – May 2026
- Collaborated with a 5 person team over 10 months to design, deploy, and integrate operator assistant
 - Saved ~6 hours of weekly manufacturing downtime by integrating directly in live supply chain data
 - Engineered a FastAPI retrieval pipeline for real-time embedding ingestion to guide floor operators
- AutoTex: Language to LaTeX** | *React, Tailwind, Electron, Ollama, Python, PyTorch* Mar 2025 – Feb 2026
- Streamlined math proof drafting by engineering an AI-powered natural language to LaTeX parser
 - Achieved ~94% character-level accuracy using a custom CNN-OCR model to process handwritten PDFs
- Employment Outreach Locator for Nonprofit** | *Python, Tableau* Nov 2025
- Placed 1st out of 20 teams at JPMC Data For Good Hackathon by building an outreach targeting engine
 - Modeled a composite metric using regional GDP and demographics to automate non-profit aid routing

Technical Skills

Languages: Python, Java, C, x86-Assembly, Typescript, SQL, HTML/CSS

Technologies: React, Spring Boot, AWS, Spark, PyTorch, Tableau, Azure, Git, Ignition, Flask, JUnit, Jenkins
